

Fuel Water Separators - FWS : EngineTech

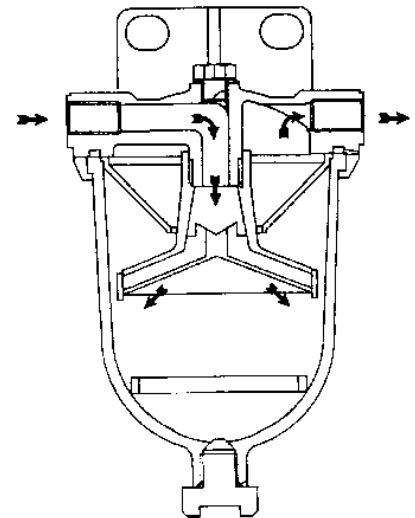

Most existing fuel filters are not designed to remove water. They are designed to remove solid contaminants.

EngineTech takes care of this shortcoming by removing virtually 100% of water from diesel fuel.

EngineTech eliminates water from diesel fuel before reaching the fuel pump and injectors. This prevents the major cause of fuel injection system failures.

Clean fuel means a smoother running engine and more cost effective operation.

EngineTech is a proven product. Prove it to yourself with an EngineTech Fuel / Water Separator.

- Less Pump & Injector Wear**
- Less Downtime & Maintenance**
- Lower Fuel Consumption**
- Lower Exhaust Emissions**
