

SM-250 Vane Starter — for engines up to 1800 CID

Both the SM-250 and SM-251 features a choice of built in, lubricator, relay valve and muffler. This reduces the hose and fittings required by nearly 50 percent.

- For engines up to 1800 cubic inches
- Pre-engaged operation

The StartMaster SM 250 air starters are widely used in trucks, buses and other heavy vehicles and equipment. All models are "pre-engaged": when the starter is activated, a small air servo signal engages the starter pinion with engine ring gear before the full thrust of air enters the starter motor. The unique design of the SM-250 series features a choice of built-in lubricator, relay valve and/or muffler. This reduces the hose and fittings required by nearly 50 percent, saving installation time and cost, and decreasing the potential for leaks in the air system.
